TAURUS MULTI-PIN CLAMP HEAD

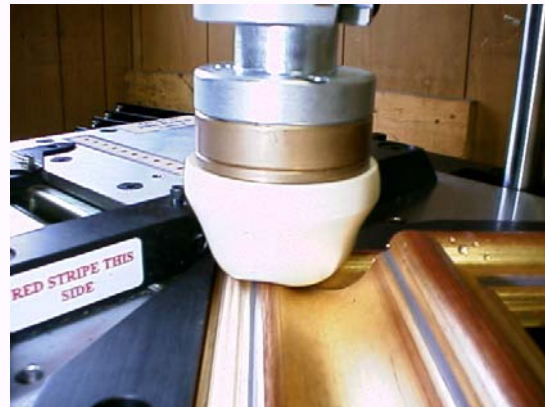

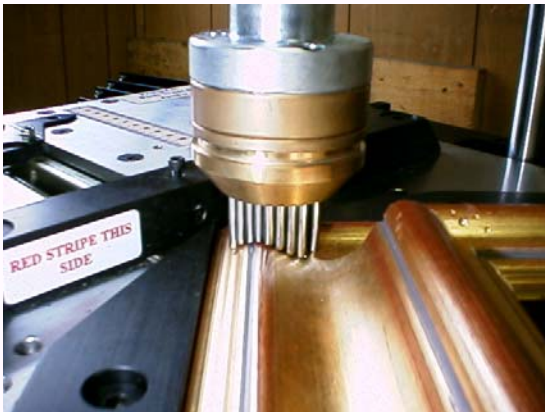

This latest addition to our accessory clamping range is for use on our 2KF, 2KS, 2KSX, and 2KSE Underpinning machines.

It is extremely versatile in its operation conforming to virtually any shape moulding that is required to join without any adjustments required.

It can replace the standard type clamp rubbers simply by releasing one knob sliding out existing clamp, and sliding this unit in place.

An air assisted version is available for the pneumatic machines.
